WebConfig

Basic Information

Web App configuration

Web App

In the "Web App" menu item

Web App

The screenshot shows the 'Web App' configuration window. It has a title bar 'Web App' and two buttons: 'Save' (labeled 6) and 'Test URL' (labeled 7). Below the buttons are four input fields: 'Protocol' (labeled 1) with a dropdown menu showing 'http://', 'URL' (labeled 2) with the text 'localhost:8080', 'Start delay in seconds' (labeled 3) with the text '2' and a unit 'seconds', and two checkboxes: 'Ignore CURL test on startup' (labeled 4) and 'Stop webconfig server' (labeled 5). Each input field and checkbox is highlighted with a red box and a red number in a circle.

1. Protocol: Select the protocol used:
 - http://
 - https://
 - local (for a locally hosted website. Files must be stored in folder /usr/share/webconfig/local)
2. URL: Add the URL where to start
3. Start delay: Setting a start delay - This is the waiting time until the browser redirects to the URL
4. Ignore CURL test on startup: To deactivate the CURL test on starting up of a webpage check this box.
Information on this configuration: The reachability of the URL is not checked with CURL at startup. This can speed up the start-up process.
5. Stop webconfig server: To terminate the Webconfig server after the successful connection with the WebApp, this option must be enabled.
Information on this configuration: Webconfig server will be shut down after entering webapp. You can enter the webconfig only directly after a reboot. This can increase the performance of the Webapp.
6. Save
7. Test URL – Note the entry Test Connection

Check connection

In the "Web App" menu item under "Test URL"

Web App

The screenshot shows the 'Check connection' window. It has a title bar 'Check connection' and two tabs: 'Connection' and 'Result'. Below the tabs are three input fields: 'Protocol' (labeled 1) with a dropdown menu showing 'http://', 'URL' (labeled 2) with the text 'localhost:8081', and 'Timeout' (labeled 3) with the text '1 s'. Below the input fields is a button 'Press Test' (labeled 4) and two buttons: 'Apply' (labeled 5) and 'Test' (labeled 6). Each input field and button is highlighted with a red box and a red number in a circle.

1. Protocol: Select the protocol for the connection check
2. URL: Enter the URL for the connection check
3. Timeout: Select a timeout
4. Apply: This will write the entered protocol and URL to the standard settings. To save it finally it is necessary to click on Save in the Web App configuration (Number 6).
5. Cancel

WebConfig

Basic Information

6. Test: This will test the connection. The state will be showed in the line above.

VNC

Background color

12

1. VNC: To open the VNC connection - instead of the Web App - after restarting the device, activate this option
2. Host: Enter the IP address of the host
3. Port: Enter the port of the VNC server
4. Username: Enter the username to connect to the VNC server
5. Password: Enter the password for the connection to the VNC server
6. Scale viewport: If enabled the remote session will be scaled to Viewport
7. Scale fullscreen: If enabled the VNC connection display will be scaled to the width of the viewport.
Attention: It may lead to distortion of the image.
8. Switch red and blue: This option can be set if the colours red and blue are displayed reversed in the VNC display.
9. Static page: This option can be set if a static page is to be displayed and the connection to the static page is repeatedly interrupted.
10. Quality level: This slider changes the quality of the displayed JPEG images. Setting 0 means low quality and setting 9 means high quality.
11. Compression level: This slider changes the compression of the VNC display transmission. The setting 0 means no compression. The Level 1 setting means little compression and the Level 9 setting means high compression. High compression is recommended for slow network connections.
12. Background color: Change the background color for VNC viewer
13. Save

WebConfig

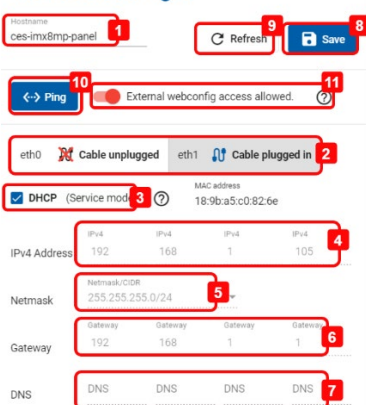

Basic Information

Browser configuration

Browser
 In the "Browser" menu item

Browser

The screenshot shows the 'Browser' configuration page. It features a 'Save' button at the top right. Below it are several checkboxes and a time input field, each with a red callout number: 1. Initial scale, 2. Scrollbars, 3. Maximum scale, 4. Touch events, 5. Disable 2d Canvas, 6. Ignore certificates error, 7. Disable hardware acceleration, 8. Automatic browser restart (checked), and 9. Hour (set to 03:00). A red box labeled 10 encloses the 'Save' button.

1. Initial scale: If the startpage is scaled incorrectly check this box
2. Scrollbars: Enables the scrollbars in the browser
3. Maximum scale: If the startpage is scaled incorrectly check this box
4. Touch events: Enables the touch events
5. Disable 2d Canvas: Disable hardware acceleration for HTML element "canvas" (2D)
6. Ignore certificates error: Just for x86 devices. Enables the option to display the start URL with the https protocol even though there is a certificate error. **Warning! By activating this option, you run the risk that a website can cause damage to your system!**
7. Disable hardware acceleration
8. Automatic browser restart: The browser is restarted automatically. **Option cannot be deactivated for All-In-One devices.**
9. Hour: Configures the time for the browser restart
10. Save

Manage certificates

In the "Browser" menu item in the "Certificates" subsection

Browser

The screenshot shows the 'Certificates' configuration page. It features a 'Refresh' button at the top right. Below it is a 'Directories' input field. Red callout numbers 1 and 2 point to the 'Directories' field and the 'Refresh' button, respectively.

1. Directories: Display and manage certificates – For further information refere to chapter Managing certificates
2. Refresh

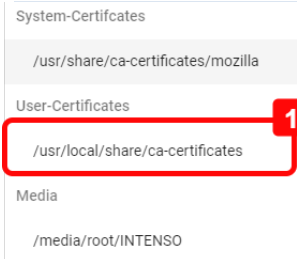

WebConfig

Basic Information

Show imported certificates

In the "Browser" menu item in the "Certificates" subsection

 Browser

1. The user certificates are displayed under "User Certificates". This generated folder is only displayed after the import and a restart of the browser. To display the list with user certificates, directories must be clicked in the Browser menu. This folder is stored on the device and the certificates in this folder are used by the browser. The name of the folder depends on the architecture (ARM or x86).

Import certificates

In the "Browser" menu item in the "Certificates" subsection

 Browser

Certificates

 Refresh

Directories

1. Directories: To display all available certificates click on directories

2. Select folder under "Media", which displays the content of the inserted USB stick. It's necessary to input a USB-Stick to the device which contains the certificate in the root folder. If no certificate is shown click on refresh.

Certificates

 Refresh

 Import

Directories

/media/root/INTENSO

Certificate

christ.root.ca.crt

christ.sub.ca.crt

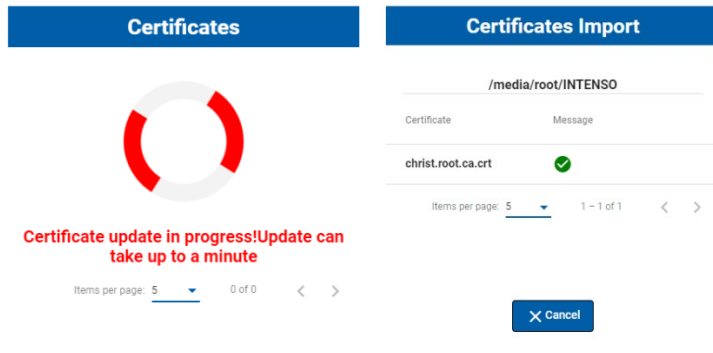

3. Select the certificate which should be imported
4. Import: The certificate will be imported. In case it's the first import of a user certificate, a new folder on the device will be generated.

WebConfig

Basic Information

After this the browser will restart and the following hints are displayed:

It's not necessary to click on it.

Delete certificates

In the "Browser" menu item in the "Certificates" subsection

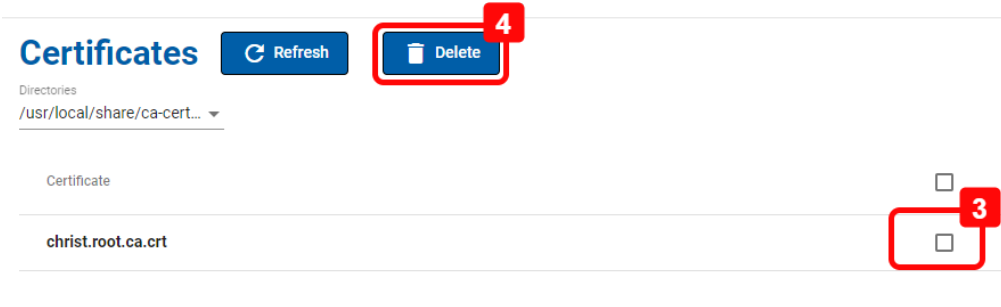

Browser

1. Directories: To display all available certificates click on directories

2. Click on the folder with the user certificates

3. Select the certificate which should be deleted
4. Delete: The certificate will be deleted. In case it's the last user certificate, the folder on the device will be deleted too.

After this the browser will restart and the following hints are displayed:

WebConfig

Basic Information

Certificates

Certificate update in progress! Update can take up to a minute

Items per page: 5 0 of 0

Certificates Delete

/usr/local/share/ca-certificates

Certificate	Message
christ.root.ca.crt	✓

Items per page: 5 1 - 1 of 1

Cancel

It's not necessary to click on it.

After the browser restart, the certificate is no longer available in the folder or, in the case described above, the folder is also deleted. To show this list click on Directories (1) in the menu Browser.

WebConfig

Basic Information

Remote access

There are following ways to access the device through the network:

Option one

In order to access the WebConfig remotely from another device (for example a desktop PC) in the network, the device IP address must be entered in the browser's address bar of the desktop PC. The IP needs to be followed by the port 8080. IP and Port are divided by ":".

→ For example 192.168.0.2:8080

You can find the device IP address in the Network menu (see Chapter "Network" → IP 4-Adress).

For All-In-One devices the port is changed to 8081.

Option two

To access the WebConfig remotely from another device in the network, it is possible to enter the device host name (by default it is defined with the prefix "christ-" and the serial number of the device) must be entered in the browser's address bar of the desktop PC. The host name needs to be followed by the port 8080. Host name and Port are divided by ":".

→ For example christ-0000000-000-007:8080

Network settings

You can find the device host name in the Network menu (see Chapter "Network" → host name).

WebConfig

Basic Information

Screenshot

In order to take a screenshot of the current screen of the WebPanel, connect remotely to the WebPanel (refer to "Remote access").

Enter the command "<IP-Address of the WebPanel>:8080/api/screenshot/file" to the browser's address bar and click "Enter".

After clicking "Enter" the download starts automatically and the picture is downloaded to the "Downloads" folder of the desktop PC.
