

Integrated UPS

No more data loss

Integrated UPS - the invisible helper

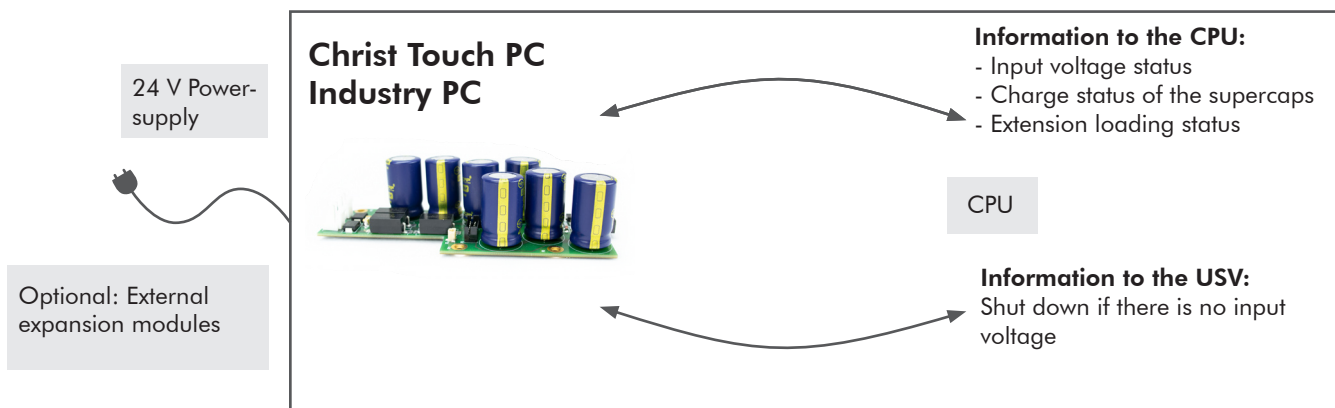

Our integrated UPS (uninterruptible power supply) is installed inconspicuously in the existing housing.

Thanks to the usable energy storage of 400 J, the Christ UPS enables a bridging period of up to 30 seconds to ensure a controlled shutdown of the computer.

If required, it can also be expanded with external energy modules and can be used at ambient temperatures of up to 50 ° C.

With up to 500,000 charging cycles, the maintenance-free supercaps are perfect for use in 24/7 continuous operation.

Functional scheme

The integrated UPS ensures that the PC shuts down in a controlled manner in the event of a power loss and prevents data from being lost. When the power supply is applied again, the panel automatically boots up again.

Features at a glance:

- Integrated UPS solution
- Bridging time up to 30 seconds
- Expandable with external modules
- Ambient temperature up to 50° C
- Up to 500,000 charging cycles
- Maintenance-free supercaps
- Suitable for 24/7 continuous operation
- Usable energy storage 400 J

Benefits of the supercaps:

- Higher temperature range
- Longer life period
- Short charging times

80 seconds up to 100% charge

45 seconds to 90% charge
